

Take advantage of the technology transition.

INTERNET OF THINGS SOLUTIONS SMART SERVICE FOR SMART SYSTEMS

Technologies change, we change. Sometimes quickly, sometimes slowly, but continually. We are currently facing one of these transition periods, both in society and technology.

We're there to support you with large-scale projects and small-scale tasks alike, from planning and commissioning to customer service. We draw on more than 40 years of valuable experience to take you to the next level.

Internet of Things

For Murrelektronik, the internet of things is simply a new way of transferring data from smart devices into the cloud. This process is independent of the controls unit and is necessary to transfer data to a higher-level system. The data can be transferred into the cloud in various ways: with a LAN cable or via the GSM standard. Once the data lands in the cloud, there are different ways of using it: for predictive maintenance, real-time analyses or creating a transparent overview of machine and production processes.

We offer different ways to make this transition in terms of technology and cost. You can transfer data via an OPC-UA interface to the Murrelektronik cloud or an independent cloud. This solu-

tion is convenient and can be directly linked your ERP systems. Here, you also benefit from our comprehensive consulting services that take you to the next level: from defining the right tools to hooking up the system and programming special interfaces for your dashboard.
